Foam Technology for the next generation

EvoMx foam, which is solely distributed by Big Gun Exhaust and has been race proven to be one of the best accessories to improve handling and track performance. EvoMx foam is a military spec foam that contains thousands of pores which eliminates sudden and violent sloshing of fuel within the tank. These effects are mostly felt in the tight turns, breaking bumps and G-outs. This is where your 12-15 lbs of fuel can feel more like 25-30 lbs sloshing front to back and side to side. With the fuel being stabilized from the EvoMx foam in your bikes tank you can experience your bike feeling 15-20 lbs lighter. The foam is also so porous that it only takes 2-3% of the volume of the tank.
